

Developer Implementation Addendum

AI Pages and Case Study Expansion

Delta specification for the Next.js build - new routes, affected templates, CMS fields, SEO requirements and publication gates

Prepared for Neologicx Resources Pvt Ltd

18 August 2026 | Developer / Content / SEO Handoff

Reference baseline: Neologicx Designer-Ready Website Content Master (34-page inventory / 82-page document), SEO migration workbook, Enterprise Solutions Portfolio, and post-master AI/case-study decisions.

ADDENDUM CONTROL

Purpose, Scope and Source of Truth

Implementation rule: Apply this document only as a delta to the earlier content master. Do not replace, rename or reinterpret any unchanged page, redirect or content decision.

What this addendum changes

- ☐ Adds one new AI service route: /ai-development-services/.
- ☐ Adds four new case-study routes under the retained /portfolio/ URL structure.
- ☐ Updates navigation, Services, Home, Case Studies, selected service pages and internal links only where necessary to expose the new content.
- ☐ Defines reusable CMS fields, page components, publication gates and acceptance checks for the additions.
- ☐ Adds no legacy redirects. The earlier migration workbook remains authoritative for all existing URLs.

What this addendum does not change

- ☐ The existing 34-page launch inventory and approved public copy.
- ☐ The canonical URLs /portfolio/, /products/ and /blog/ or their navigation labels Case Studies, Solutions and Insights.
- ☐ The earlier one-hop redirect map, 404/410 decisions, trailing-slash convention or indexed portfolio PDF handling.
- ☐ The existing nine selected case studies already specified in the content master.
- ☐ The core positioning: Neologicx remains a product engineering and custom software company with AI implementation capability - not a foundation-model research company.

Delivery priority

Priority	Work item	Developer action	Publish state
P0	Reusable page/template support	Complete before entering new content	Production
P1	AI service page	Build and connect across Services	Publish after capability review
P1	Four new case studies	Create CMS records and routes	Draft until evidence approval
P1	Hub and internal-link updates	Release with approved new pages	Production

Priority	Work item	Developer action	Publish state
P2	Additional portfolio candidates	Do not build in this sprint	Backlog

CHANGE REGISTER

New Route Manifest

ID	Action	Canonical path	Type	Initial status
N-01	NEW	/ai-development-services/	Service	Ready after capability review
N-02	NEW	/portfolio/dairy-manufacturing-erp/	Case study	Build as draft
N-03	NEW	/portfolio/engineering-consultancy-erp/	Case study	Build as draft
N-04	NEW	/portfolio/ai-knowledge-assistant-health-workers/	Conditional case study	Strict review gate
N-05	NEW	/portfolio/event-marketplace-india-singapore/	Case study	Build as draft

Route behavior

- ☐ Each published route returns HTTP 200 and renders its primary copy server-side or at build time.
- ☐ Each route has one self-referencing HTTPS canonical using the site's final trailing-slash convention.
- ☐ Draft records must not be discoverable in navigation, internal links or sitemap.xml. Production should return 404 for an unpublished public slug rather than an indexable placeholder.
- ☐ No new route redirects to or from an older URL because these pages have no legacy equivalent.
- ☐ Do not create duplicate /case-studies/... versions. The retained public hub and child-path convention is /portfolio/.

Affected existing surfaces

Existing surface	Required delta	Release dependency
Global Services menu	Add AI & Intelligent Automation	N-01 published
/services/	Add AI service card and link	N-01 published
Home	Add concise AI capability mention; feature AI proof only when approved	N-01; N-04 optional
/portfolio/	Add four cards, filters/tags and featured ordering	Each approved case study

Existing surface	Required delta	Release dependency
Custom Software / API / SaaS	Add contextual links to N-01	N-01 published
WhatsApp page	Link AI-assisted flows to N-01 without duplicating channel content	N-01 published
Footer service links	Add AI & Automation only if service links are shown	N-01 published
Sitemap / search / CMS	Include only published, canonical records	Per-record status

INFORMATION ARCHITECTURE DELTA

Navigation, Hubs and Featured Content

Services navigation

New label: AI & Intelligent Automation -> /ai-development-services/

Place it as a primary service entry near Product Engineering and Custom Software Development. Do not create separate top-navigation entries for AI Chatbots, AI Agents or Workflow Automation at this stage.

Services hub card

Card title	AI Solutions & Intelligent Automation
Card copy	AI knowledge assistants, connected workflows, document intelligence and AI features integrated with business systems.
CTA	Explore AI Solutions
Destination	/ai-development-services/
Card rule	Use the same component, image ratio and hover/focus behavior as other primary service cards.

Home page delta

- ☐ Add one AI capability card or a short AI line inside the existing capabilities section; do not replace the approved homepage hero.
- ☐ Suggested card title: AI & Intelligent Automation.
- ☐ Suggested card copy: Build grounded AI assistants and connected workflows around your business data and existing systems.

- ☐ Link the card to </ai-development-services/>.
- ☐ Feature the health-worker AI story only after it passes the publication gate. Until then, use Dairy ERP, Engineering ERP or Event Marketplace as the replacement proof card.

Case Studies hub delta

Add the four new records to the existing </portfolio/> listing. Reuse the current card component; do not create a second case-study hub.

Case study	Primary filter	Secondary tags	Homepage eligibility
Dairy Manufacturing ERP	Manufacturing	ERP, Mobile, Operations	Yes
Engineering & Consultancy ERP	Enterprise Software	ERP, Procurement, Projects	Yes
Health Worker AI Assistant	AI & Automation	Healthcare, Knowledge Assistant	Only after approval
Event Marketplace	International Products	Marketplace, Payments, Events	Yes

Filter SEO: Portfolio filters may use client-side state or query parameters, but filtered states must not create duplicate indexable pages. Keep </portfolio/> as the canonical hub unless separate editorial category pages are intentionally created later.

NEW PAGE N-01

AI Solutions & Intelligent Automation

Build as a reusable service-page instance, not as a one-off landing-page component tree.

Implementation record

Final URL	https://neologicx.com/ai-development-services/
Page type	Primary service page
Navigation label	AI & Intelligent Automation
H1	AI Solutions & Intelligent Automation
SEO title	AI Development & Intelligent Automation Neologicx
Meta description	Build AI knowledge assistants, document intelligence and human-supervised workflows integrated with your business data, APIs, CRM and ERP systems.
Primary CTA	Discuss Your AI Use Case -> /contact/?service=ai
Secondary CTA	Explore Our AI Work -> /portfolio/?capability=ai
Source	Post-master AI decision; Enterprise Solutions Portfolio pp. 27-30

Migration	New route. No redirect. Add to sitemap only after publication.
------------------	--

Hero content

Turn business knowledge, documents and repetitive processes into useful AI-enabled experiences. We build intelligent assistants and connected workflows that work with your existing applications, APIs and business data.

Required section order

#	Component / anchor	Content requirement	Implementation note
1	ServiceHero	H1, lead, two CTAs	Reuse standard service hero
2	Intro / practical-ai	Business-first AI positioning	Short prose + principle callout
3	CapabilityGrid / capabilities	Six capability cards	3x2 desktop; single column mobile
4	UseCaseGrid / use-cases	Grouped buyer use cases	Accessible cards; no carousel-only content
5	ConnectedAIFlow / how-it-works	Question-to-action explanation	Use semantic ordered steps
6	ControlPanel / responsible-ai	Grounding, permissions, guardrails, human review	Visible content, not tooltip-only
7	ProcessSteps / delivery	Six delivery steps	Reuse process component
8	FeaturedCaseStudy / proof	Health-worker AI or approved substitute	CMS-selected relation
9	CTASection	Discuss Your AI Use Case	Track CTA and preserve query parameter

NEW PAGE N-01 - CONTENT PAYLOAD

AI Capability Cards and Control Language

Capability cards

Card title	Approved working description
AI Knowledge Assistants	Assistants grounded in approved company documents, policies, manuals and knowledge bases.
Customer Support AI	Conversational systems for answering questions, classifying requests, drafting responses and escalating complex cases.

Card title	Approved working description
AI Workflow Automation	Workflows that interpret unstructured information, trigger controlled actions and connect with existing business systems.
Intelligent Document Processing	Extract, classify, summarize and route information from forms, invoices, applications and other documents.
AI Features for Existing Software	Add search, recommendations, summarization or intelligent assistance to web, mobile, SaaS, CRM and ERP platforms.
AI Agents & System Integration	Connect AI with approved APIs and tools so it can retrieve information or perform controlled actions.

Engineering principle

Required public wording: Not every process needs AI. Combine deterministic business rules, software integrations and AI where each adds genuine value. Consequential actions require clearly defined control or human approval.

Control and trust items

- ☐ Approved knowledge sources and retrieval grounding where appropriate.
- ☐ Role-based access and data boundaries inherited from connected systems.
- ☐ Scope limits, fallback responses and human escalation paths.
- ☐ Evaluation of representative questions and failure cases before release.
- ☐ Logging, monitoring and versioned prompts/configuration where implemented.
- ☐ Privacy and sensitive-data review appropriate to the use case.

Prohibited or conditional claims

- ☐ Do not publish '100% accurate', 'fully autonomous', 'guaranteed secure' or 'proprietary AI' unless independently supportable.
- ☐ Do not list OpenAI, Azure OpenAI, Gemini, Bedrock, LangChain, vector databases or other platform names until engineering confirms active delivery capability.
- ☐ Do not describe rule-based automation as AI. Use 'rule-based or AI-assisted' when both are present.
- ☐ Do not promise medical, legal, financial or compliance decisions without an approved, domain-specific scope.

N-01 acceptance checks

- ☐ All main copy is present in rendered HTML without requiring interaction.
- ☐ H1 is unique; section anchors are stable; cards remain meaningful on mobile.
- ☐ Both CTAs resolve correctly and preserve intended analytics parameters.
- ☐ Related links point to Custom Software, API Integration, SaaS, WhatsApp and approved AI proof.
- ☐ Metadata, canonical, Open Graph image, breadcrumb and sitemap state match publication status.

NEW PAGE N-04 - CONDITIONAL

AI Knowledge Assistant for Field Health Workers

Implement the route and content record as draft. Publish only after the domain/compliance evidence gate is signed off.

Implementation record

Final URL	https://neologicx.com/portfolio/ai-knowledge-assistant-health-workers/
Page type	Conditional case study
H1	A Guardrailed AI Knowledge Assistant for Field Health Workers
SEO title	AI Knowledge Assistant for Health Workers Neologicx
Meta description	An AI-assisted learning and support experience designed to help field health workers access approved training and operational information.
Primary CTA	Discuss an AI Knowledge Assistant -> /contact/?service=ai
Related service	/ai-development-services/
Earlier reference	Enterprise Solutions Portfolio p. 28; no prior public URL
Migration	New route. No redirect. Keep draft and out of sitemap until approval.

Required narrative structure

Section	Content boundary	UI treatment
Context / challenge	Field access to training and operational information	Short narrative
Solution	Conversational learning/support experience using approved content	Product screenshot + summary
Workflow	Question -> scope/access check -> approved retrieval -> response -> fallback/escalation	Five-step diagram
Guardrails	Defined topic scope, approved sources, fallback, human	Prominent trust panel

Section	Content boundary	UI treatment
	escalation, review	
Delivered capabilities	Only features verified by project owner	Capability list
Technology	Only confirmed architecture/platform names	Key-facts row
Results	Verified scale or operational evidence; otherwise omit	Metric cards only with evidence
Related work	AI page, API integration, WhatsApp where applicable	Related links

Mandatory safety language: Present this as a learning and information-support tool. Do not imply diagnosis, treatment advice or replacement of qualified medical judgment unless the delivered system, client approval and applicable review explicitly support that claim.

Publication gate

- ☐ Confirm whether the work was deployed, piloted or only demonstrated.
- ☐ Confirm client/project naming permission and public screenshot permission.
- ☐ Document the exact approved knowledge sources and who maintains them.
- ☐ Confirm guardrail, fallback, escalation, privacy and access-control behavior.
- ☐ Confirm supported languages and technology stack before listing them.
- ☐ Provide at least one verified scale or outcome item, or publish without a results block.

Status behavior: If the evidence gate is not complete, keep the CMS record in draft. Do not quietly relabel a prototype as a client case study.

NEW PAGE N-02

Dairy Manufacturing ERP Case Study

Implementation record

Final URL	https://neologicx.com/portfolio/dairy-manufacturing-erp/
H1	Digitizing Milk Collection, Production and Inventory for a Dairy Manufacturer
SEO title	Dairy Manufacturing ERP Case Study Neologicx
Meta description	A dairy operations platform connecting mobile milk collection, production, inventory, billing and controlled material movement.

Primary CTA	Discuss a Manufacturing Workflow -> /contact/?service=custom-software
Related service	/custom-erp-software-service/
Earlier reference	Enterprise Solutions Portfolio p. 7; no prior public URL
Migration	New route. No redirect. Publish after client and evidence approval.

Required content modules

- ☐ Context: fragmented collection, production, inventory and billing workflows.
- ☐ Collection workflow: mobile field input with offline/online behavior only if verified.
- ☐ Production workflow: conversion or production records linked to inventory movement.
- ☐ Inventory and controls: material receipt, issue, transfer and reconciliation as delivered.
- ☐ Billing/reporting: verified billing, statements and management visibility.
- ☐ Operational flow visual: collection -> receipt -> production -> inventory -> billing/reporting.
- ☐ Results: use only client-confirmed scale, locations, users, transactions or time savings.

Evidence and design requirements

Item	Required before publication
Client identity	Permission or approved anonymous description
Screens	Actual mobile collection, production and dashboard screens
Workflow facts	Module list, user roles, locations and offline synchronization behavior
Technology	Confirmed mobile, backend, database and deployment stack
Outcomes	Verified operational scale or measurable result
Claim boundary	Do not state 'prevents pilferage' or complete traceability without evidence

NEW PAGE N-03

Engineering & Consultancy ERP Case Study

Implementation record

Final URL	https://neologicx.com/portfolio/engineering-consultancy-erp/
H1	A Unified ERP for Project, Procurement, Documentation and Shipping Workflows
SEO title	Engineering & Consultancy ERP Case Study Neologicx

Meta description	A unified ERP connecting projects, procurement, document control, approvals and shipping workflows across engineering operations.
Primary CTA	Discuss an Enterprise Workflow -> /contact/?service=custom-software
Related service	/custom-erp-software-service/
Earlier reference	Enterprise Solutions Portfolio p. 8; no prior public URL
Migration	New route. No redirect. Publish after client and evidence approval.

Required content modules

- ☐ Business context: cross-department project work and fragmented operational information.
- ☐ User groups: identify actual project, procurement, documentation, shipping, finance and management roles.
- ☐ Module map: show only delivered modules and their relationships.
- ☐ Approval flow: request -> review -> approval -> procurement/documentation -> dispatch/shipping -> reporting.
- ☐ Access model: explain multi-location or global access only if delivered and verified.
- ☐ Integrations: list connected systems, document repositories or external services only after engineering confirmation.
- ☐ Results: prefer verified departments, projects, records, approval time or reporting improvements.

Developer presentation

Component	Requirement
CaseStudyHero	Enterprise interface screenshot plus Project / Procurement / Documentation / Shipping tags
KeyFacts	Industry, geography, platform, user groups and delivery scope - verified only
ModuleGrid	Reusable cards; do not encode modules directly in JSX
WorkflowDiagram	Responsive step/branch component; accessible text equivalent required
Gallery	Actual screens with descriptive alt text
RelatedServices	ERP, Custom Software, API Integration

NEW PAGE N-05

Events Marketplace Case Study

Implementation record

Final URL	https://neologicx.com/portfolio/event-marketplace-india-singapore/
H1	Building a Multi-Sided Events Marketplace for India and Singapore
SEO title	Events Marketplace Product Engineering Neologicx
Meta description	A multi-sided events marketplace for India and Singapore with participant workflows, payments, commissions and platform administration.
Primary CTA	Discuss a Marketplace Product -> /contact/?service=product-engineering
Related service	/product-engineering/
Earlier reference	Enterprise Solutions Portfolio p. 18; no prior public URL
Migration	New route. No redirect. Publish after client and evidence approval.

Required content modules

- ☐ Marketplace context: multiple participant groups need one coordinated event ecosystem.
- ☐ Role model: confirm and display the actual user types; do not infer public roles from generic marketplace patterns.
- ☐ Core journeys: discovery/listing, onboarding, booking or transaction, payment, commission and administration as delivered.
- ☐ Regional delivery: explain India and Singapore scope factually without implying offices or regulatory certifications not held.
- ☐ Platform operations: moderation, reporting, payouts or communication only where verified.
- ☐ Results: use approved event, organizer, provider, booking, transaction or geography figures.

Developer presentation

Component	Requirement
RoleTabs	Reusable, keyboard-accessible roles; all content visible without hover
JourneyMap	Responsive marketplace flow with text alternative
CapabilityTags	Marketplace, Payments, Commissions, Administration
Gallery	Use product UI; avoid generic event stock imagery as primary proof
InternationalBadge	India & Singapore - factual geography, not an unsupported global-scale claim
RelatedServices	Product Engineering, SaaS Development, API Integration

REUSABLE IMPLEMENTATION

Case Study Template and CMS Delta

Template rule: All four additions must use the same case-study template and CMS model as the existing nine selected case studies. Avoid page-specific JSX except for genuinely unique visuals.

Required case-study fields

Field group	Minimum fields	Validation / behavior
Identity	title, slug, shortTitle, clientDisplayName, anonymityMode	Unique slug; client name optional
Classification	industry, geography, projectType, capabilityTags	Controlled taxonomy
Hero	h1, lead, heroImage, heroAlt, primaryCTA	Image and alt required to publish
Narrative	context, challenge, solution, modules, workflow	Structured blocks, not one HTML blob
Evidence	facts, metrics, sourceOwner, evidenceStatus	Metrics require source and approval
Technology	platforms, stack, integrations	Optional; verified values only
Media	gallery, captions, alt text	Optimized responsive assets
Relations	relatedServices, relatedCaseStudies	At least one service relation
SEO	seoTitle, metaDescription, canonical, ogImage	Canonical generated from slug
Publishing	status, approvalOwner, approvedAt, featured, sortOrder	Draft excluded from public build/sitemap

Recommended publication states

State	Public behavior	Sitemap	Hub card
draft	Public route returns 404; preview environment only	Exclude	Hide
approved	Eligible for production deployment	Include on release	Show
published	HTTP 200, indexable, internally linked	Include	Show
archived	Editorial decision required; do not auto-redirect	Exclude	Hide

Card component requirements

- ☐ Title, one-line verified summary, industry label, two or three capability tags, image and href.
- ☐ Entire card may be clickable, but the title link must remain keyboard and screen-reader accessible.
- ☐ Use a consistent image ratio and responsive sizes; do not load full-resolution dashboard exports in listing cards.
- ☐ Do not show empty metric, logo, testimonial or technology areas.
- ☐ Featured ordering must come from CMS fields rather than hard-coded array order.

NEXT.JS IMPLEMENTATION DELTA

Routing, Metadata, Structured Data and Search

Recommended route implementation

Area	Implementation requirement
AI service	app/ai-development-services/page.tsx or equivalent CMS-driven route
Case studies	Reuse app/portfolio/[slug]/page.tsx; generate approved slugs from CMS
Metadata	Use static metadata or generateMetadata from validated CMS fields
Sitemap	Generate from published/indexable records only; use canonical URLs
Robots	Do not use robots.txt as the draft-publication mechanism
Rendering	Server-render or pre-render primary content; avoid client-only page bodies
Error state	Unknown/unpublished slug -> notFound() / HTTP 404
Preview	Use protected preview mode; preview URLs remain non-indexable

Structured data

- ☐ Emit BreadcrumbList for each new page and keep visible breadcrumbs consistent with JSON-LD.
- ☐ Keep Organization data site-wide and consistent with the approved company name, location, logo and contact details.
- ☐ Use WebPage for service and case-study pages. Article may be added only when author/date/editorial fields are genuinely maintained.
- ☐ Do not use Product, SoftwareApplication, Review, AggregateRating or FAQ markup merely to pursue a rich result.
- ☐ Structured data must describe content that is visibly present on the page.

Metadata and share assets

- ☐ One title, meta description, canonical, Open Graph title/description/image and Twitter-compatible image per route.
- ☐ Default OG fallback is allowed, but each featured case study should receive a relevant approved project image.
- ☐ Do not expose CMS draft text or placeholder imagery in server-rendered metadata.
- ☐ Keep mobile and desktop metadata/content equivalent.

Existing migration remains untouched: Do not modify the earlier redirect configuration while adding these routes. Re-run the full redirect test suite because route or middleware changes can accidentally shadow existing redirects.

LINKING AND MEASUREMENT DELTA

Internal Links, Analytics and Release Discovery

Required internal links

Source	Destination	Suggested anchor
/services/	/ai-development-services/	AI Solutions & Intelligent Automation
Custom Software	/ai-development-services/	AI-enabled business workflows
API Integration	/ai-development-services/	AI agents and system integration
SaaS Development	/ai-development-services/	AI features for SaaS products
WhatsApp	/ai-development-services/	AI-assisted conversational workflows
AI service	Approved AI case study	See the knowledge-assistant

Source	Destination	Suggested anchor
		implementation
Each new case study	Primary related service	Contextual service label
Each new case study	/portfolio/	View all case studies

Measurement additions

Preserve the existing GA4/consent implementation. Reuse the site's analytics abstraction; do not embed page-specific tracking scripts.

Interaction	Recommended event	Parameters
Primary/secondary CTA click	cta_click	page_type, page_slug, cta_label, cta_location
Case-study card selection	select_content	content_type=case_study, item_id=slug, card_location
Successful enquiry	generate_lead	service_interest, source_page
Outbound demo/app link	outbound_click	destination, page_slug

Analytics governance: If the existing analytics specification uses different event names, retain it. Consistency across the site is more important than adopting this naming literally.

Post-release discovery

1. Confirm each approved route appears in sitemap.xml and returns the intended canonical.
2. Inspect the AI service and at least one case-study URL in Search Console after release.
3. Check server logs or crawl output for unexpected 404s and duplicate paths.
4. Monitor impressions and qualified enquiries before splitting the AI service into narrower SEO pages.

PUBLICATION GOVERNANCE

Evidence, Claims and Backlog Boundaries

Minimum approval record for every new case study

Approval item	Owner	Required evidence
Client/name/logo permission	Management / client owner	Written approval or approved anonymization

Approval item	Owner	Required evidence
Scope and modules	Project owner	Delivered feature/module list
Technology and integrations	Engineering lead	Current technical record
Screenshots	Project owner / designer	Approved, redacted production/demo assets
Metrics/outcomes	Client owner / management	Source record and date
Security/compliance language	Engineering / domain owner	Accurate, scoped wording
Final public copy	Content/management	Approved CMS revision

Phase 2 candidates - do not build now

These were identified as potentially case-study-worthy, but they remain outside this implementation delta until evidence, screenshots and permission are available:

- ☐ Legal Case Management System
- ☐ Rail Crossing Status App
- ☐ Institute Operations Platform / ORAD
- ☐ Recruitment Software
- ☐ Construction Management Software (only if deployed)
- ☐ Bhikharam Chandmal E-commerce
- ☐ Club Management System
- ☐ Rajasthan Kabir Yatra
- ☐ Pharma Compliance System
- ☐ WhatsApp Commerce Platform

Portfolio-card only items

Do not create full case-study routes in this sprint for generic or lightly evidenced work such as School ERP, Conference Platform, Food Delivery, Mock Test, Job Portal or smaller e-commerce implementations. These may appear as selected-work cards where accurate.

Scope-control decision: Do not create separate AI Chatbot Development and AI Workflow Automation pages yet. The umbrella AI page should accumulate evidence first; split it only when search demand and multiple verified implementations justify distinct pages.

RELEASE GATE

Developer Acceptance Checklist

Build and content

- ☐ Five new route records exist; public status matches the change register.
- ☐ New pages use reusable service/case-study components and CMS data.
- ☐ No unchanged page copy or route has been altered by this addendum.
- ☐ No placeholder text, unsupported metrics, unapproved logos or unverified technology names remain.
- ☐ AI health-worker content passes the stricter domain/compliance gate before publication.

SEO and technical

- ☐ Published routes return 200; draft/unknown routes return 404 on public production.
- ☐ Self-referencing canonicals, metadata and Open Graph assets are correct.
- ☐ Only published canonical URLs appear in sitemap.xml.
- ☐ Breadcrumbs and JSON-LD match visible page hierarchy/content.
- ☐ Primary page content is present in initial server-rendered HTML.
- ☐ Existing redirect matrix still passes one-hop redirect and status tests.
- ☐ No accidental noindex, staging host, duplicate /case-studies/ path or filter URL is indexable.

UX, accessibility and performance

- ☐ Heading order is logical and each page has one H1.
- ☐ Cards, tabs, filters and CTAs are keyboard accessible with visible focus states.
- ☐ Workflow diagrams have equivalent text and do not rely only on color.
- ☐ Images use responsive sizing, compression, explicit dimensions and useful alt text.
- ☐ Mobile layouts retain the same meaningful content as desktop.
- ☐ No case-study evidence is hidden behind interaction that search engines or assistive technology cannot access.

Sign-off

Discipline	Name	Status / date
Development		

Discipline	Name	Status / date
